The journal *Fisheries Science* is published monthly. It is the official journal of the Japanese Society of Ichthyology and Japanese Society of Fisheries Sciences. It is intended to publish original research papers, review articles, and short communications in all fields of basic and applied research. A special feature of the journal is that it publishes articles in Japanese, English, or Chinese. Basic and applied research articles in Japanese and English are peer-reviewed by an international committee of referees. Two parts of the journal are submitted to the Japanese Society of Ichthyology and the Japanese Society of Fisheries Sciences. The journal is published twice yearly in English and once yearly in Japanese. The journal is published six times per year. *Fisheries Science* is distinguished by its scope, quality, and international reputation, and is intended to reflect the diversity of research in fisheries science.

Fisheries Science is a journal of the Japanese Society of Ichthyology and the Japanese Society of Fisheries Sciences. It has a rich history of publication, particularly in Japan, and is now well known throughout the world. It has a wide range of applications, particularly in the field of marine biology and ecology, and is highly regarded by scientists and students of marine biology and ecology.
